Ideation Phase

Brainstorm & Idea Prioritization Template

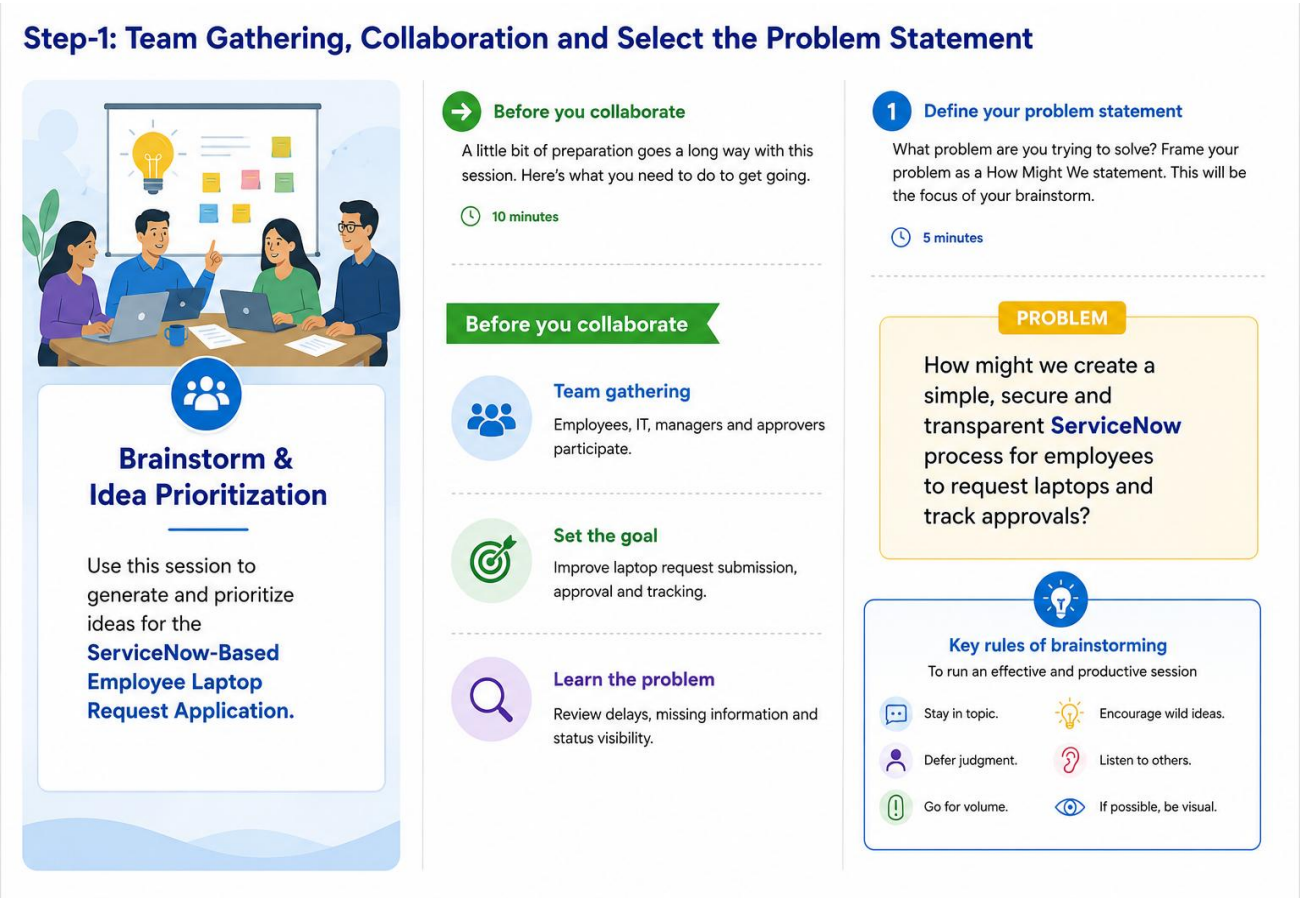

Date	September 2026
Project Name	ServiceNow-Based Employee Laptop Request Application

Brainstorm & Idea Prioritization Template

Brainstorming is a collaborative process used to generate and explore potential solutions to the identified problem. In this phase, team members contribute ideas freely, consider different perspectives, and build upon one another's suggestions without immediate judgment.

For the ServiceNow-Based Employee Laptop Request Application, the brainstorming process focuses on identifying effective solutions for laptop request submission, approval management, request tracking, notifications, security, and IT fulfillment. The generated ideas are then organized and prioritized based on their impact, feasibility, and relevance to the project requirements.

This approach helps the team identify practical and innovative solutions that can improve the employee laptop request experience while supporting an efficient, transparent, and secure ServiceNow workflow.

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm

Write down ideas that address the employee laptop request problem statement.

Group ideas

Cluster similar ideas into themes such as request submission, approvals, tracking, security and notifications.

1. Employee Requests
- Self-service laptop request portal
- Laptop catalog with configurations
- Business justification capture
- Request form with guided questions

2. Approvals
- Manager approval workflow
- Automated approval routing
- Approval notifications and alerts
- Escalation rules for delays

3. Tracking & UX
- Real-time request status tracking
- Request history and audit trail
- Dashboard for employees
- Mobile friendly interface

4. IT & Security
- Email notifications and updates
- Roles and groups based access
- ACLs for data protection
- Business rules validation

5. Fulfillment
- Asset availability check
- Assign laptop to employee
- Delivery tracking updates
- Handover acknowledgment capture

6. Data & Backend
- Request table creation
- Approval relation rules
- Data validation rules
- Integration with CMDB

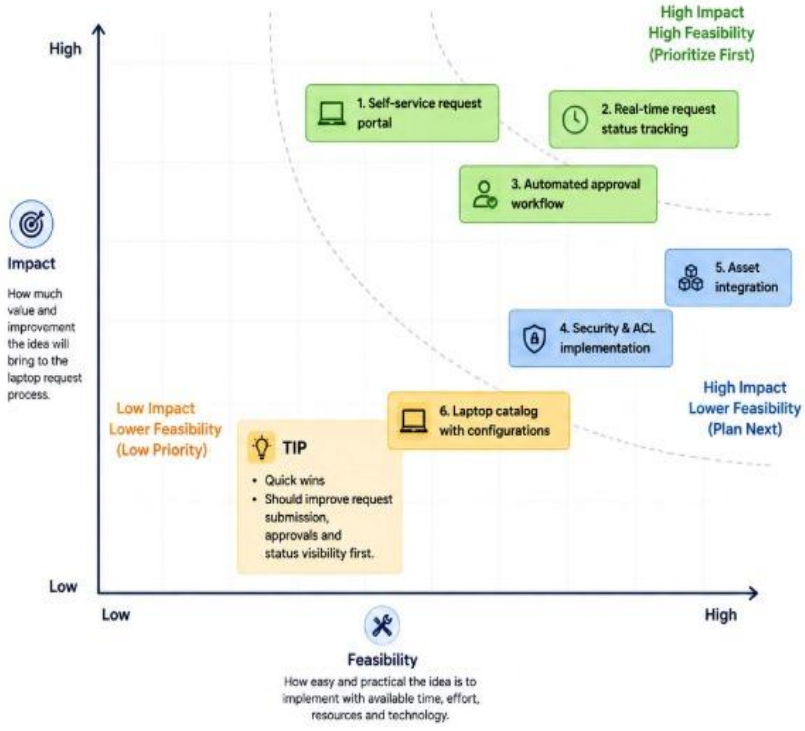

7. Reporting
- Request dashboard for IT
- Approval metrics report
- Fulfillment report
- SLA compliance report

8. Knowledge
- Request process guidelines
- FAQ for employees
- Standard operating procedures
- Troubleshooting and support info

Step-3: Idea Prioritization

Prioritize

Prioritize the ServiceNow laptop-request ideas by impact and feasibility.

IDEA PRIORITY LIST

	Focus Area	Priority
1 Self-service request portal	Employee Requests	High
2 Real-time request status tracking	Tracking & UX	High
3 Automated approval workflow	Approvals	High
4 Security & ACL implementation	IT & Security	Medium
5 Asset integration	Fulfillment / Integration	Medium
6 Laptop catalog with configurations	Employee Requests	Medium

Top 3 high priority ideas will be considered for the initial phase of development.
