ServiceNow-Based Employee Laptop Request Application

Date	September 2026
Project Name	ServiceNow-Based Employee Laptop Request Application

Employee Journey Map

ServiceNow-Based Employee Laptop Request Application

Journey Stage	ENTICE How does the employee become aware?	ENTER What happens at the start?	ENGAGE What happens in the core process?	EXIT What happens when it finishes?	EXTEND What happens afterward?
STEPS	Employee needs a laptop and learns that requests are handled through ServiceNow.	Employee opens the Employee Service Catalog and selects Laptop Request.	Employee enters requester, manager, laptop type and reason, then submits.	Manager approves or rejects; request status is updated and outcome is communicated.	Employee can refer to the completed request and use the controlled process for future eligible requests.
INTERACTIONS	Employee interacts with colleagues/IT and the internal ServiceNow portal.	Employee uses the Service Catalog and Laptop Request Record Producer.	Employee, manager and ServiceNow workflow interact through the request, Business Rule and Flow Designer.	Manager reviews the approval; employee receives status/notification.	Employee and IT can refer to the ServiceNow request record and history.
GOALS & MOTIVATIONS	Help me know where and how to request a laptop.	Help me submit the request correctly without manual email.	Help me avoid duplicate requests and reach the correct approver.	Help me know the decision and what happens next.	Help me keep a traceable record for future requests.
POSITIVE MOMENTS	Centralized and clear process.	Standard form with controlled fields.	Automated validation and approval reduce manual effort.	Status and notifications improve visibility.	Traceability and accountability.
NEGATIVE MOMENTS	Employee may initially be unsure where to start.	Incorrect or missing information can delay submission.	Waiting for approval can create uncertainty.	Rejection may require clarification.	Fulfillment/provisioning is outside the current scope.
AREAS OF OPPORTUNITY	Make the Service Catalog entry easy to find.	Use clear mandatory fields and helpful choices.	Add approval reminders and richer status tracking.	Show rejection reasons and next steps clearly.	Integrate approved requests with asset management and laptop provisioning.

Scenario: Submitting, validating, approving, tracking and completing an employee laptop request through ServiceNow. Layout follows the supplied Customer Journey Map example with the five stages Entice, Enter, Engage, Exit and Extend, and the six journey rows.
