Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	September 2026
Project Name	ServiceNow-Based Employee Laptop Request Application

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Employee Laptop Request	Submit laptop request through ServiceNow Select laptop model/configuration and provide business justification
FR-2	Approval Management	Route requests to manager/authorized approver Approve or reject requests with comments and notifications
FR-3	Request Tracking & Notifications	View request and approval status in real time Receive status updates and notifications throughout the process
FR-4	IT Fulfillment & Delivery	Check laptop/asset availability Assign laptop to employee and update delivery/handover status
FR-5	Security & Access Control	Apply role-based access for employees, managers and IT staff Protect request information and validate submitted data
FR-6	Request History & Reporting	Maintain request and approval history/audit trail Provide reports for request, approval and fulfillment status

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The ServiceNow request form should be simple, clear and easy for employees to submit and track laptop requests.

NFR-2	Security	Use role-based access and ACLs to ensure only authorized users can view or update employee and request information.
NFR-3	Reliability	Requests, approvals, notifications and status updates should be processed consistently with minimal data loss or failure.
NFR-4	Performance	Request submission, status lookup, approval actions and dashboard views should respond efficiently under normal workload.
NFR-5	Availability	The application should remain accessible during working hours so employees, approvers and IT teams can manage requests without unnecessary interruption.
NFR-6	Scalability	The solution should support growth in employees, laptop requests, approvals and records without major changes to the application design.
