Project Planning Phase

Sprint Planning Logic – ServiceNow-Based Employee Laptop Request Application

Date	September 2026
Project Name	ServiceNow-Based Employee Laptop Request Application

Planning Logic / Estimation

The following section explains how the project work is divided into Sprints, Epics, User Stories, and Story Points. The same planning logic used in the template example is applied to the ServiceNow-based employee laptop request project.

A Sprint: A fixed period or duration in which the team works to complete a selected set of project tasks.

An Epic: A large feature or project area that is too big to complete in one Sprint. It is divided into smaller User Stories.

A Story: A small, manageable requirement or task that forms part of an Epic.

A Story Point: A relative measure of the effort required to complete a User Story. The project uses the Fibonacci-style values 1, 2, 3 and 5.

Story Point Scale

1	Very easy task
2	Normal task
3	Moderate task
5	Difficult task

Sprint 1 – Request Submission & Approval

Objective: Build the core laptop-request process so employees can submit complete requests and the appropriate approvals can be initiated.

Epic	User Story	Story Points	Priority
Laptop Request Management (Epic 1)	Submit Laptop Request (USN-1)	**3**	High
Laptop Request Management (Epic 1)	Capture Business Justification (USN-2)	**2**	Medium
Eligibility & Validation (Epic 2)	Validate Employee Eligibility (USN-3)	**3**	High
Approval Management (Epic 3)	Route Request for Approval (USN-4)	**5**	High
Notifications (Epic 4)	Send Request Confirmation Notification (USN-5)	**2**	Medium

Total Story Points in Sprint 1 = 3 + 2 + 3 + 5 + 2 = 15

Sprint 2 – Status Tracking, Fulfillment & Visibility

Objective: Extend the workflow with real-time tracking, asset availability, notifications, IT fulfillment updates, and management visibility.

Epic	User Story	Story Points	Priority
Status Tracking (Epic 5)	Track Laptop Request Status (USN-6)	**3**	High
Status Tracking (Epic 5)	Display Approval Progress (USN-7)	**3**	High
Notifications (Epic 6)	Send Status Update Notifications (USN-8)	**2**	Medium
Asset & Fulfillment (Epic 7)	Check Laptop Availability (USN-9)	**5**	High
Asset & Fulfillment (Epic 7)	Record IT Fulfillment Update (USN-10)	**2**	Medium
Reporting & Dashboard (Epic 8)	View Request Summary Dashboard (USN-11)	**2**	Medium

Total Story Points in Sprint 2 = 3 + 3 + 2 + 5 + 2 + 2 = 17

Total Story Points & Team Velocity

Sprint 1	15 Story Points
Sprint 2	17 Story Points
Total Story Points	**15 + 17 = 32**
Number of Sprints	**2**

Velocity = Total Story Points Completed ÷ Number of Sprints

Velocity = 32 ÷ 2 = 16 Story Points per Sprint

Therefore, the team's average velocity is 16 Story Points per Sprint.

Burndown Chart Logic

A burndown chart is used to show how much planned work remains during a Sprint. For this project, the chart can track the remaining Story Points against the Sprint days. As User Stories are completed, the remaining Story Points should decrease toward zero.

Sprint	Starting Story Points	Completed Story Points	Remaining Story Points
Sprint 1	15	15	**0**

Sprint 2	17	17	**0**
